

## Viconic Belongs in Every Fall Management Strategy

AI-powered prediction systems, fall detection technologies, cameras, sensors, and wearables are transforming how senior living providers manage falls. These technologies help identify risk, improve awareness, and support better clinical decisions.

They improve information. **Viconic improves protection.**

Technology can help predict falls. Technology can help detect falls. But no technology changes what happens when a resident contacts the floor.

### Why Viconic Is Essential

Despite best efforts, falls will continue to happen. That's why every fall management strategy needs a layer of passive protection that is always working—regardless of staffing levels, workflows, batteries, connectivity, or resident participation.

Installed beneath the finished floor, Viconic Fall Defense helps reduce the risk of Falls with Major Injury (FMI) by protecting residents at the moment of impact.

Unlike tech solutions, Viconic does not depend on people or processes. There are no wearables to charge, cameras to monitor, alerts to review, software to maintain, or workflows to manage.

Once installed, Viconic simply becomes part of the care environment, providing:

- Always-on protection—24 hours a day, 365 days a year
- Passive protection that helps reduce the risk of FMI
- Support for resident independence without restricting mobility
- Protection that complements fall prediction, detection, and clinical interventions
- Greater peace of mind for residents, families, caregivers, and providers

**Senior care providers using Viconic Fall Defense have reported an average**

**88%**

**reduction in falls with major injury to date.**

### The Missing Layer

Fall prediction and detection technologies can play an important role in a comprehensive fall management strategy. But they are designed to provide information.

### Viconic is designed to provide protection.

That's why Viconic isn't an alternative to fall technology. It's the essential layer that helps reduce the risk of a fall with major injury—whether your community uses fall technology or not.

**Falls happen. Serious injuries don't have to.**
